Paste a custom limit string into a BrioQuery report

Paste a custom limit string into a BrioQuery report

I want to use BrioQuery to run a query, but I may want to paste in my own limit string. For example, if I wanted to get a printout of kerb names from a moira list, and format them into a string to use as the limit. This article describes how to do it.

Steps

1. Open a new BrioQuery report, or a canned report that you will be modifying.
2. Drag a table into the tables area, or choose one that is already there.
3. Drag the field you will be limiting into the Limits area.
   Result: The Limits dialog box opens.
4. Select the Custom values button.
5. Type or paste in whatever custom limit string you want.
