## Password Reset Options

### Self-Service Password Reset

#### Domain Users

If you are on a domain-controlled computer and use your Kerberos credentials to log into your computer, you may find this page helpful: [Remote Domain Computers and Password Changes](#).

Before you begin the process of resetting your Kerberos password, please make sure you are using the correct password. Your Kerberos password may be different than the password you normally use to log in or check your e-mail if you have a departmental account (such as @sloan.mit.edu, @csail.mit.edu, @math.mit.edu, @plant.mit.edu, etc).

If you're sure you need your password reset, there are multiple options:

In order to reset your password yourself, you will need one of the following:

- **A valid certificate**
  - If you have a valid MIT personal certificate installed, and want to reset the password, you can reset your password online by visiting [Change Your Kerberos Password](#) (it is the second option on the page.)

Be sure you have cookies enabled or you'll get unknown user error messages.

- **Push-Enabled Duo Two Factor Authentication Device**
  - If you have a Push-Enabled device enrolled in Duo, and want to reset the password, you can reset your password online by visiting [Change Your Kerberos Password using Duo Push](#)

For requirements and recommendations when setting a new password, please see the [Strong Passwords](#) article.

## Contact the Service Desk

If neither of the self-service password options works for you, the Service Desk can help you reset your password, if you provide proper ID verification. Please email a **selfie with you holding your MIT ID** with your password reset request to [accounts@mit.edu](mailto:accounts@mit.edu).

Please be sure the **name and photo on the MIT ID are clear** and please do not cover any part of your face with the ID. Also, please include an alternative email address and a phone number we can use to reach you. Email it to [accounts@mit.edu](mailto:accounts@mit.edu). It is very important that we can read the ID from this photo, so please make sure the ID is in focus and **can be read** from the image before sending it to us as an attachment. **Do not send us pictures of just your ID, you must be present in the image and holding the ID for it to be a valid form of identification verification.**

**Tip:** *Getting closer to the camera and having someone assist you with taking this photo can make this method of password reset easier.*

If you do not have an MIT ID, you can email [accounts@mit.edu](mailto:accounts@mit.edu) and request ID verification through a Zoom meeting. You can also visit the Atlas Service Center on the bottom floor of E17 for in-person assistance.

For requirements and recommendations when setting a new password, please see the [Strong Passwords](#) article.
