How can I print a PostScript document in landscape orientation?

How can I print a PostScript document in landscape orientation?

One way to print out a PostScript file in landscape (so that the text runs with the long dimension of the paper), is to use the mulitps program in the postscript locker. To convert a document, just type

```
add postscript
multips -r1 -c1 -l file.ps > filel.ps
```

at your athena prompt.
