

# How can I preview a PostScript file on Athena?

## How can I preview a PostScript file on Athena?

In most cases, you can simply double-click on a PostScript file to open it in Evince ("Document Viewer").

From the command-line, you can run `evince`.

An older but still useful Postscript viewer is called ghostview, or `gv` for short. You can run it from the command line by typing `gv`.
