## How can I configure Pine to save copies of sent messages?

Here are the basic steps to configure MIT's Pine to save outgoing messages in a folder on the mail server:

1. Launch pine.
2. Go into **Setup** (select SETUP or type 'S' from the main screen).
3. Type 'C' to go to the Config section.
4. Hit the down arrow 7 times, the line beginning with "default-fcc" should now be highlighted.
5. Hit **Return** to edit that config entry.
6. Enter a name for the saved messages mailbox ("Saved Messages" tends to be the standard) and hit **Return**. You should see the change reflected on screen.
7. Exit setup by pressing 'E'. Pine will ask you if you want to "Commit changes". Hit **Return** or press 'Y' to do so.
8. Compose a message. When you send it, pine will tell you that the "Saved Messages" folder does not exist, and ask if you want to create it. Press 'Y' or hit **return** to do so.

That should do it. You should see the folder in your standard folder collection and should be able to browse to it.
