

How do I print wide (132 characters) text files?

How do I print wide (132 characters) text files?

To print a wide text file, use the "enscript" command, like so:

```
enscript -Pprinter -r filename
```

This will print the file, rotated on the page, with a heading. To suppress the header, use:

```
enscript -Pprinter -Br filename
```

"Enscript" can print your files many different ways, including printing two columns on the page. This is especially good for program listings:

```
enscript -Pprinter -2r filename
```

For more information about "enscript", type:

```
man enscript
```
