Not enough memory for backup operation

Not enough memory for backup operation

Question(s)

- TSM Error:

```
ANS5013E Not enough memory for backup operation
```

Context

- TSM backup
- This seems to happens mostly on Macintoshes...

Solution

- Sometimes it's as simple as closing a few applications, then opening up and running TSM.
- Also try rebooting.

If these don't help, you can do a manual backup, and select only some of your folders (instead of all folders). Selecting fewer filenames will consume less memory. After the partial backup completes, try a full backup again.
