Changing Your Font and Font Size in Drupal

Changing Your Font and Font Size in Drupal

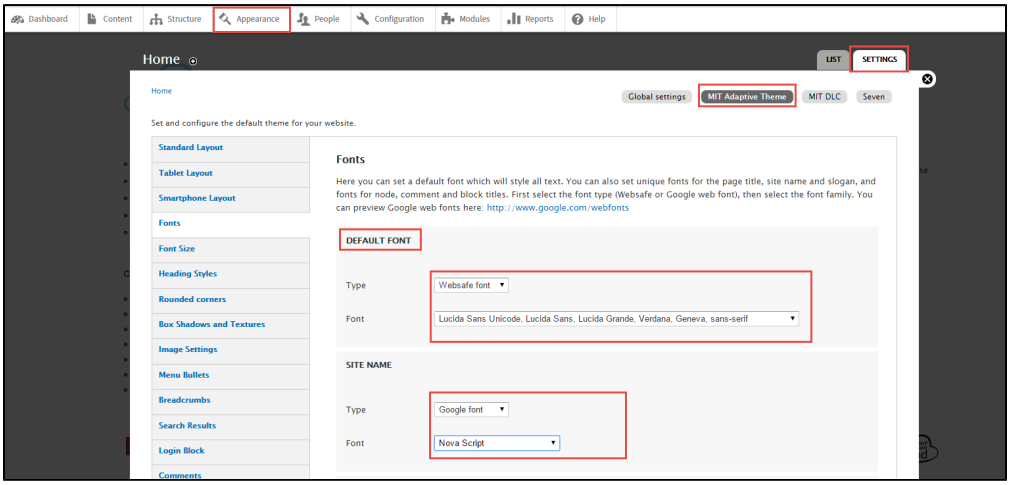

Return to Drupal Cloud Landing Page

> **Note**
> These setting are available when using the *MIT Adaptive* theme. They are **not** available when using the default *MIT DLC* theme.

You can easily change the font for various kinds of text on your site through the Appearance menu. You can set the default font for your site and set different fonts for other site elements such as the site name and slogan, and page title. You can use standard web safe font families or choose from a large set of Google fonts.

Changing Your Font

1. Click **Appearance**, then **Settings**, then **MIT Adaptive Theme**.
2. Click **Fonts** in the list on the left.

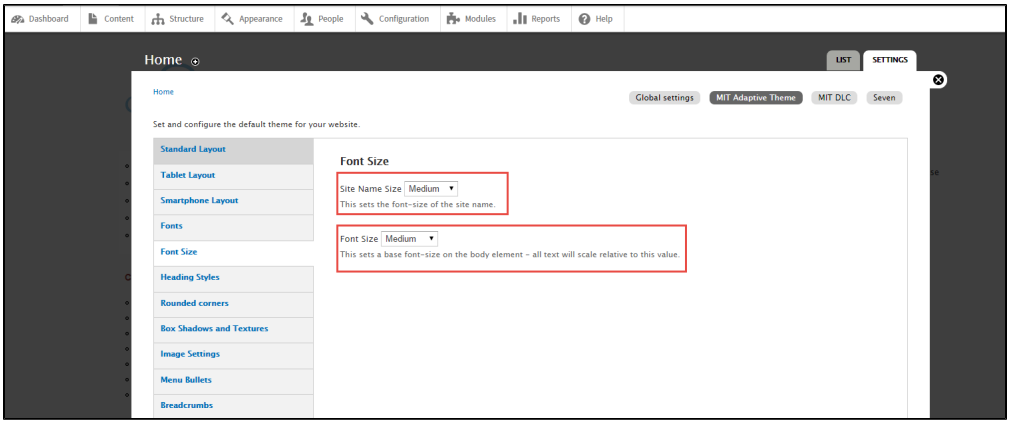

3. For default font and other page elements elect the font type - Websafe or Google web font, then select the font family or Google font. Click the link at the top to preview the Google web fonts.

Note: If you are using a theme other than MIT Adaptive, use the **CSS Injector** (*Configuration* > *Development* > *CSS Injector*) to override the theme defaults. This requires familiarity with HTML and CSS.

Changing Your Font Size

1. Click **Appearance**, then **Settings**, then **MIT Adaptive Theme**.
2. Click **Font size** in the list on the left.

3. Select small, medium or large for your site name and for the base font of your site.
