How do I find out who the container administrator is for my win.mit.edu domain?

Q: How do I find out who the container administrator is for my win.mit.edu domain?

Answer

You can enter your machine's name in the "WinAthena Host and Administrator lookup" form at the following site: https://wince.mit.edu/host2admin/index.jsp (certificates required).

This page will list the Kerberos ID's of everyone listed as an administrator of the container that machine belongs to.
